

Start your moving plan

Five minutes to set up your private copy. No account is needed for the Excel files or printables.

1. Choose your copy

Open moving-planner-blank.xlsx to start. The example file is fictional and shows how the calculations work. Google Sheets copy links are in README.txt and on the download page.

2. Set the move date

On Start here enter your date, boroughs and circumstances in the blue cells. Grey cells calculate. These are suggested planning dates, not official deadlines.

3. Add the first room

Enter an item ID, room, item, quantity and packing status in Inventory. Add its box in Boxes. All quantities on a row share its packing status.

4. Record costs and quotes

Use VAT inclusive figures and whole team hourly rates. Leave unknown costs blank. Record each extra and whether it is already included. Deposits reduce the balance.

5. Use Timeline and Summary

Work through relevant tasks, set owners and mark completed tasks Done. Check Summary for overdue tasks, unknown costs and packing progress.

6. Print only what you need

Forms and labels come in A4 and US Letter. Print labels at 100% and measure the 50 mm calibration line before cutting. They are plain paper labels, not a tested adhesive stock template.

7. Keep your information private

Use your own copy and control its sharing. Do not store passwords, payment credentials or identity numbers. The public demonstration contains fictional details only.

8. Get updates

Version 1.0.0. Research references retain their own checked dates. The website provides current files and instructions. Support: hello@eastlondonmanwithavan.com.
